

One number. One form. **Then they wait.**

The homeowner.

Waiting...

The installer.

Homeowner · 4,500 kWh

Roof ?	Heating ?
EV ?	Budget ?

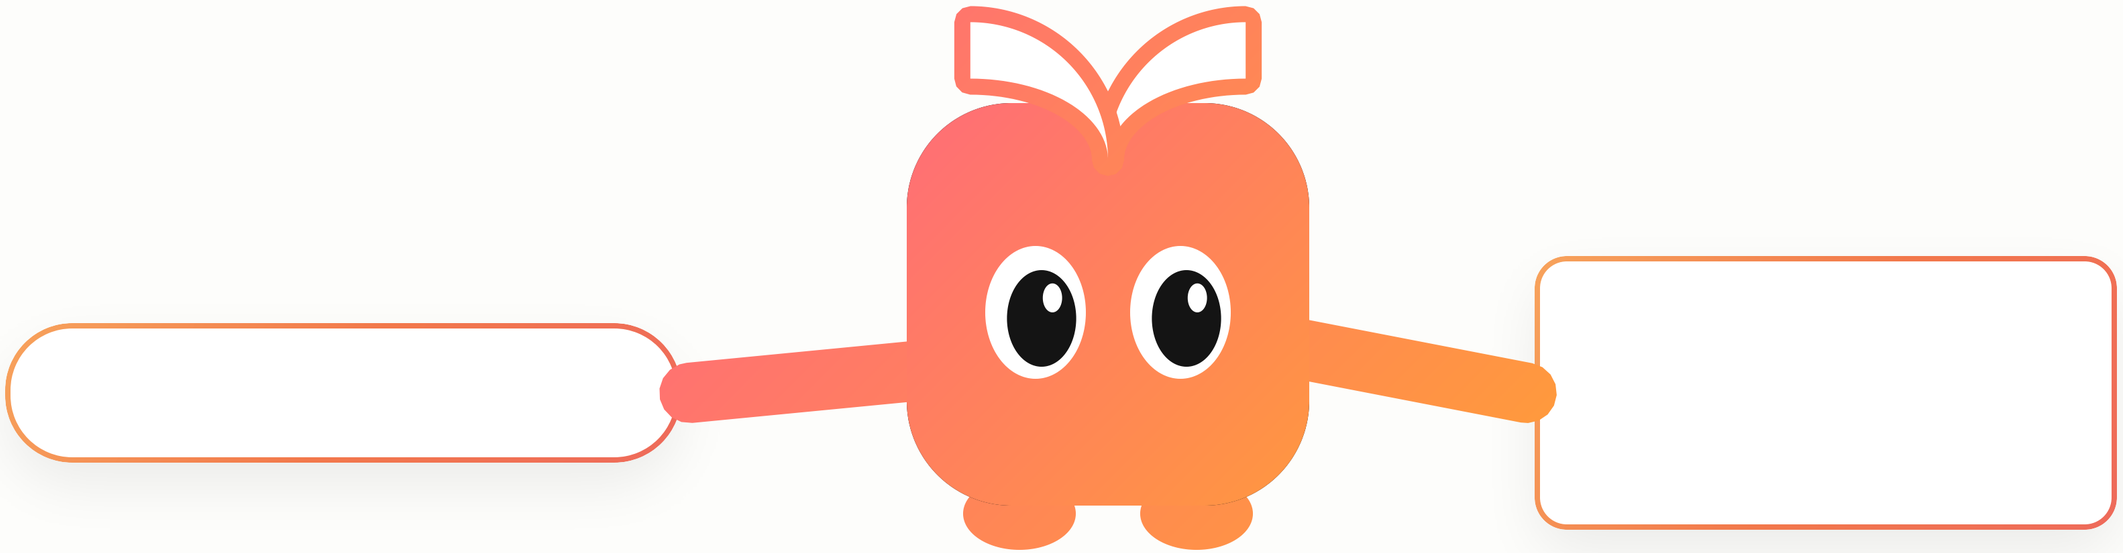

- [ ] Call back
- [ ] Ask roof size
- [ ] Ask heating
- [ ] Ask about the car...

Design and price: hours

Neither side is at fault. **The gap is.**

We wanted to go further

The line only **carries** messages. reo does the **work**.

Homeowner

TAP ANY NUMBER

...and the advisor explains it.

Savings, ROI, own power: each one answers **“why?”**

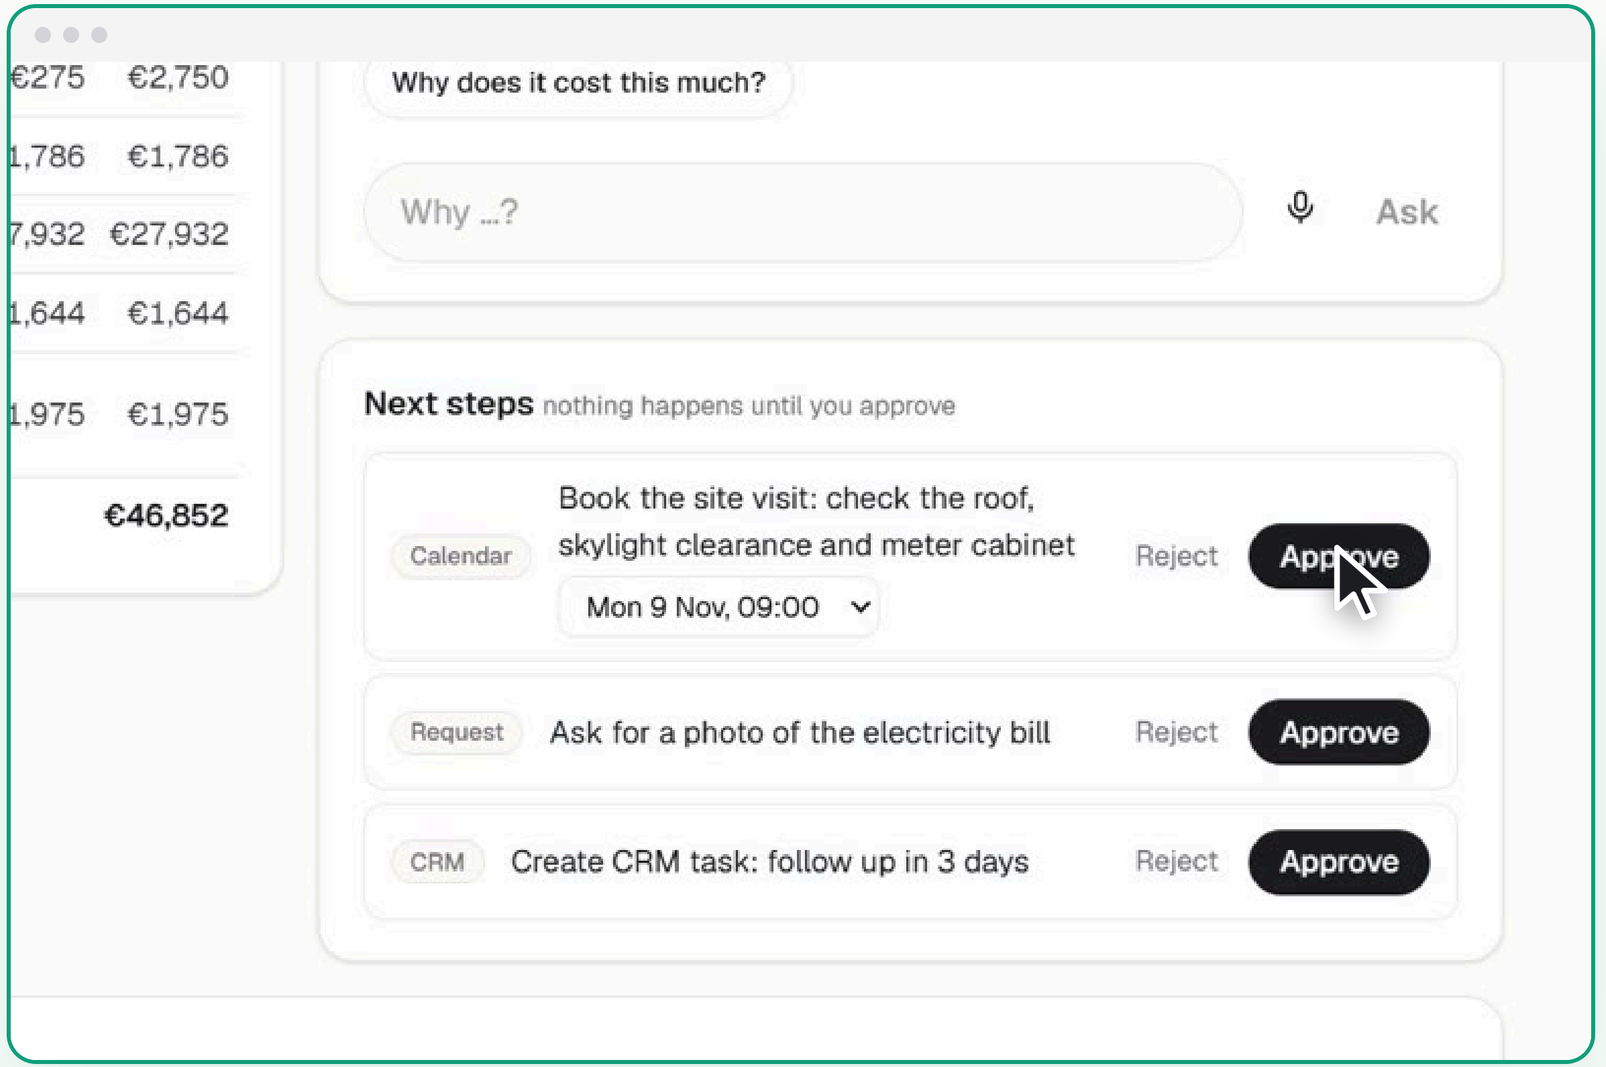

THEN IT ASKS

Nothing happens until the planner says yes.

Book the site visit, ask for the bill, create the CRM task: **each one waits for Approve**.

Planner

HOMEOWNER

Your planner has confirmed your plan

Confirmed by Sonnfeld

~~Estimate €40,000–45,100~~

Confirmed quote
€46,852

PLANNER

Quote sent

The customer now sees the confirmed plan and price on the website.

The estimate becomes a confirmed quote, in the installer's own words.

WHICH BRINGS US TO

the business facts.

THE BUSINESS CASE

The planner starts from a ready offer, not a blank lead.

For the installer

- Each lead arrives with a design, a price range and a draft message
- The planner handles exceptions; every edit re-derives the numbers
- Nothing is sent until the planner approves
- White-label: customers see the installer's brand

For the homeowner

- An answer today, not a callback
- A reason for every number, one tap away
- Prices marked **estimate** until the installer confirms
- Nothing sold to them; they choose to hand over

What we will measure with installers: **Time per offer** **Win rate** **Design quality** baselines to be measured with Reonic

ENVIRONMENTAL IMPACT

Every plan comes with its CO_2 saving.

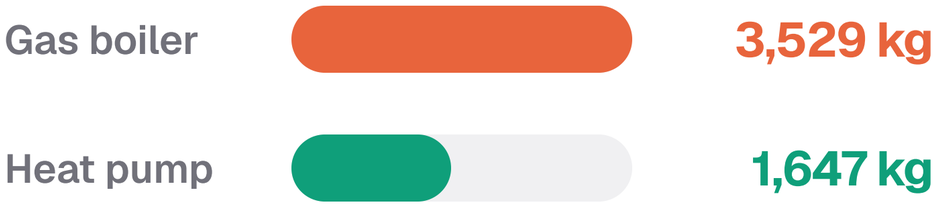

ROOFTOP SOLAR

11,260 kWh a year

generated by the engine's design, avoiding about **3.9 t of CO_2** a year

11,260 kWh × 344 g CO_2 per kWh (German grid mix, UBA 2025)

HEAT PUMP INSTEAD OF GAS

53 % less CO_2

CO_2 per year for the same heat. Heat pump on grid power; own solar improves it.

A typical demo home: 4,500 kWh a year, electric car planned, gas heating, Bavaria. Estimates from the reo engine; emission factors from UBA.

Live demo

Now, live.

Plan **your own home** with reo on Sonnfeld's website, or watch the demo first.
